

Long Reach Wheel Brush

SKU: BRU37 | Made in Germany

Reaches deep into the wheel barrel where standard brushes can't follow. Looped bristles ensure only soft fibre — never the inner wire — contacts painted, lacquered, or alloy surfaces. A nylon and natural horsehair blend delivers low flick-back agitation for a comfortable, scratch-free clean every session. The looped bristle construction means the bristle material, not the inner wire, is what touches your wheel — so even fully extended into a tight gap, there's no risk of scratching your finish.

PRODUCT SPECIFICATIONS

Total Length	42 cm
Bristle / Head Area	21 cm
Handle Length	11 cm
Handle to Brush End	31 cm
Bristle Type	Nylon & natural horsehair blend
Construction	Looped — no inner wire contact with wheel surface
Handle Material	Beech wood
Stem Material	Coated steel
Hanging Hook	Stainless steel wire loop
Safe For	Alloy, painted & lacquered wheel finishes
Country of Origin	Germany
Pack Size	Single unit — pack to order

KEY FEATURES & SELLING POINTS

- **Scratch-Free Deep Reach.** Looped bristles flex into tight barrel gaps — only soft fibre ever contacts the wheel. Zero metal-to-surface risk, even fully extended.
- **Low Flick-Back Action.** The nylon and horsehair blend minimises chemical splash-back, making it comfortable for professionals working back-to-back sessions.
- **Extended Barrel Reach.** At 42 cm overall with a 21 cm bristle head, it reaches the inner rim and full barrel — exactly where most brushes stop short.
- **Beech Wood Handle.** A natural wood grip that stays secure and comfortable with wet or gloved hands through long detail sessions.
- **Hang-to-Dry Design.** The stainless steel loop hook allows proper hanging storage and drying, protecting bristle shape between uses.
- **Broad Wheel Compatibility.** Safe on alloy, painted, and lacquered finishes — cars, vans, motorcycles, and trailers.

RETAIL & ORDERING

RRP (UK)	£20.00
RRP (Europe)	€25.00
EAN	5 056497 700966
Pack Size	Single unit
Fulfilment	Pack to order
Pairs Well With	Bilberry Wheel Cleaner, Dragon's Breath, Large Sash Brush, Grey Drying Towel, Classic Quick Detailer
Customer Support	Full retailer & end-user support provided by ValetPRO

HOW TO USE

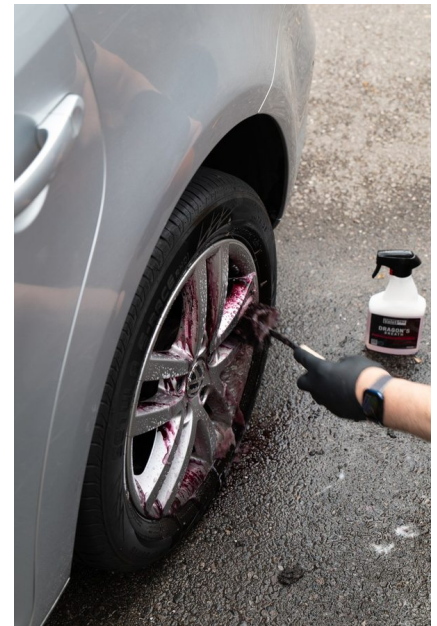

1. Rinse the wheel with clean water to remove loose dirt and grit before applying any product.
2. Apply your wheel cleaner of choice — Bilberry Wheel Cleaner for painted or lacquered alloys, or Dragon's Breath for a pH-neutral option — and allow it to dwell.
3. Work the brush behind the spokes and into the barrel, letting the looped bristles flex naturally into tight gaps. Don't force them.
4. Rinse thoroughly with clean water, then dry the wheel with a microfibre drying towel.
5. Finish with a wipe-over of Classic Quick Detailer for an extra layer of gloss and protection.
6. Rinse the brush thoroughly after every use and hang it to dry using the stainless steel loop hook. Never store compressed or folded — this distorts the bristle shape over time.

CARE & STORAGE

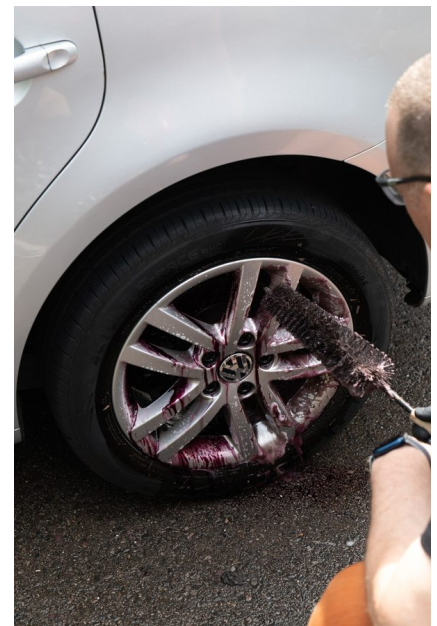

Rinse thoroughly after every use — the natural horsehair component is not chemical-resistant and prolonged exposure to wheel cleaners will degrade the bristles. Hang to dry using the stainless steel loop hook. Store away from direct sunlight. Do not leave compressed or folded.
