

Long Reach Wheel Brush

BRU37 | Made in Germany

Brake dust and road grime build up hardest where standard brushes can't reach — deep inside the barrel and behind the spokes. The Long Reach Wheel Brush solves that. Soft looped bristles get into every corner without scratching painted, lacquered, or alloy finishes, while the nylon and horsehair blend keeps flick-back low so you stay comfortable through the whole clean. Whether you detail cars professionally or just take pride in keeping yours right, this brush does the job properly.

SPECIFICATIONS

Total Length	42 cm
Bristle Area	21 cm
Handle Length	11 cm
Handle to Brush End	31 cm
Bristle Type	Nylon & natural horsehair blend
Bristle Design	Looped — only soft bristle contacts your wheel, not the inner wire
Handle	Beech wood
Stem	Coated steel
Hanging Hook	Stainless steel loop
Safe On	Alloy, painted & lacquered wheel finishes
Made In	Germany

KEY BENEFITS

- **Gets where other brushes can't.** At 42 cm long with a 21 cm bristle head, it reaches right into the barrel and around the inner rim — the areas where brake dust really collects.
- **Won't scratch your finish.** The looped design means only soft bristle ever touches your wheel. The inner wire stays away from the surface, even deep in tight gaps.
- **Comfortable to use.** The nylon and horsehair blend creates a low flick-back action — less chemical ends up on your arm, more stays on the wheel where it belongs.
- **A handle that actually works.** Beech wood feels natural in your hand and stays secure when wet or gloved — no slipping mid-clean.
- **Built to last.** The stainless steel loop hook lets you hang it to dry properly between uses, which keeps the bristles in shape and the brush performing.
- **Works on everything.** Safe on alloy, painted, and lacquered finishes — whatever your wheels, this brush won't let you down.

Reaches the full barrel

HOW TO USE

1. Give the wheel a rinse with clean water first to knock off any loose dirt and grit.
2. Apply your wheel cleaner — Bilberry Wheel Cleaner works brilliantly on painted and lacquered alloys, or use Dragon's Breath if you want a pH-neutral option or aren't sure of your wheel finish. Let it dwell for a minute.
3. Work the brush behind the spokes and into the barrel. The looped bristles will flex naturally into tight gaps — just guide the brush, don't force it.
4. Rinse the wheel thoroughly with clean water, then dry with a microfibre towel.
5. A quick wipe-over with Classic Quick Detailer adds a layer of gloss and protection while the wheel is clean — well worth the extra minute.
6. Rinse the brush after every use and hang it up with the loop hook to dry. Don't leave it compressed or folded — it will distort the bristle shape over time.

CARE & LOOKING AFTER YOUR BRUSH

The natural horsehair in the bristle blend is what gives this brush its soft, low flick-back feel — but horsehair isn't chemical-resistant, so always rinse the brush thoroughly after every use. Leaving wheel cleaner sitting in the bristles will break them down over time. Hang it to dry after every wash using the stainless steel loop, store it somewhere away from direct sunlight, and it'll last you a long time.

COMPLETE THE CLEAN — PAIRS WELL WITH

Bilberry Wheel Cleaner

Our go-to alkaline wheel cleaner for painted and lacquered alloys — dissolves brake dust and lifts grime without harming the finish

Dragon's Breath

pH-neutral iron fallout remover — safe on all wheel finishes and turns purple as it reacts with brake dust. Great if you're unsure of your wheel finish

Large Sash Brush

Use alongside the Long Reach Wheel Brush to agitate the outer face and spokes — together they cover the whole wheel

Grey Microfibre Drying Towel

Soft, streak-free drying once the wheel is rinsed — quick and leaves a clean finish

Classic Quick Detailer

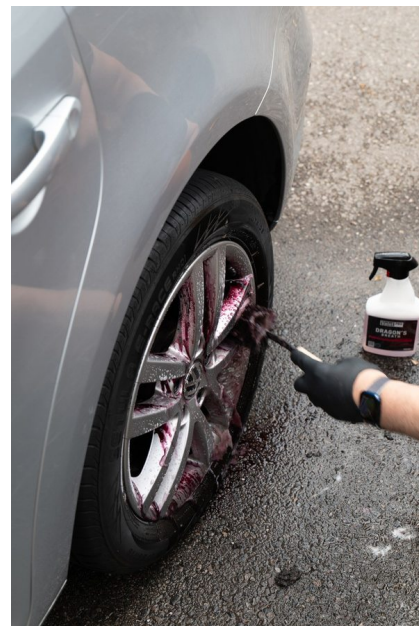

A final wipe-over once the wheel is clean and dry — adds gloss and a light protective layer that makes the next wash easier
